

**Tenure-Track Assistant Professor**  
**Machine learning in Marine Microbial Ecology**  
**Department of Marine Sciences**  
**University of Georgia**

The University of Georgia (UGA) is hiring a cluster of six tenure-track or tenured faculty in Environmental Artificial Intelligence (AI) through a [Presidential Faculty Hiring Initiative](#) over two years with three positions to start August 2022, and three positions to start August 2023. The faculty positions are distributed over the following four departments within [Franklin College of Arts and Sciences](#): [Department of Geography](#), [Department of Marine Sciences](#), [Department of Statistics](#) and [Department of Anthropology](#).

The Environmental AI cluster will strengthen and expand UGA's position as a global leader in atmospheric, terrestrial, and oceanic processes across wide-ranging spatial and temporal scales. UGA is seeking to build on its existing core strengths in big data analyses and multi-scale modeling of earth and marine systems, paleoclimate, and human-environmental change and organizational complexity by developing innovative computational and statistical methodologies to advance understanding of ecosystem resilience and to support climate science and sustainability. This hiring cluster is aimed at 1) advancing machine learning capabilities in sensor networks and remotely sensed data; 2) simulating and evaluating environmental responses at multiple scales and planning for resource management strategies; and 3) evaluating relationships between environmental forcing mechanisms and responses.

Collectively, these new faculty members will contribute to the understanding of ecosystem resiliency in the face of sea-level rise, increasingly extreme weather events, ocean warming and acidification, and how these climate patterns have changed through time. These are the most challenging and pressing research problems of our time with vast implications for decision-makers and the public for adapting to and mitigating environmental change. To facilitate interaction among these researchers, each faculty member will join the existing Environmental AI working group and be encouraged to collaborate with faculty in related research centers or institutes across campus.

As part of the cluster hire, the Department of Marine Sciences is seeking a tenure-track faculty position at the rank of Assistant Professor in Marine Microbial Ecology who will apply 'omics and bioinformatics, modeling approaches, and/or biostatistical methods to marine microbial ecosystems to address climate, community structure, ecosystem function, or other ecological phenomena. The position starts on August 1, 2022 and is an academic year appoint (9 months) with an opportunity to supplement salary during the summer.

Applicants must hold a PhD or equivalent degree in a computational, marine, or biological science area. The successful candidate will also have at least 1 year of postdoctoral training. We are interested in candidates who will combine both wet lab and computational methods, and who will complement existing expertise in experimental studies of marine microbial processes, as well as a record that provides evidence of scholarship, synergistic activities, and the potential to obtain extramural funding.

The successful candidate is expected to contribute to our new and growing Ocean Science B.S. program and to the Marine Sciences graduate programs by teaching both data science and marine microbial ecology components. The successful applicant will also be expected to establish an outstanding research program recognized both nationally and internationally, foster partnerships within and outside the University of Georgia, exhibit a strong commitment to teaching excellence, and support research and mentoring of students and postdocs. The Department of Marine Sciences has faculty located on both the UGA main campus in Athens, where this position will be located, and at the Skidaway Institute of Oceanography in Savannah, GA.

Competitive applicants will have demonstrated interdisciplinary collaborations that cut across academic units on campus. Inclusiveness and diversity are academic imperatives and thus university goals, and the University is particularly interested in candidates with experience working with students from diverse backgrounds and who have a demonstrated commitment to improving access to higher education for students from underrepresented groups.

Applications received by December 31, 2021, are assured full consideration; however, applications will be accepted until the position is filled. Applicants will be asked to provide names and contact information for 3 references using the online system. Supporting documents should include a cover letter addressing the candidate's background relative to the responsibilities of the position, curriculum vitae, 3 representative publications, and a statement on commitment to diversity, equity, and inclusivity. In addition, applicants should provide a statement of teaching philosophy and a statement of research philosophy that highlights their interest in data science and artificial intelligence, and their contributions to understanding environmental change and marine microbial ecosystems.

**Questions about the cluster:** Dr. Daniela Di Iorio ([daniela@uga.edu](mailto:daniela@uga.edu)), Department Head Marine Sciences

**Questions about the position:** search committee chair Dr. Mary Ann Moran ([mmoran@uga.edu](mailto:mmoran@uga.edu))

The University of Georgia is an Equal Opportunity/Affirmative Action employer. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, national origin, ethnicity, age, genetic information, disability, gender identity, sexual orientation, or protected veteran status. Persons needing accommodations or assistance with the accessibility of materials related to this search are encouraged to contact Central HR ([hrweb@uga.edu](mailto:hrweb@uga.edu)). Please do not contact the department or search committee with such requests. The Franklin College of Arts and Sciences, its many units, and the University of Georgia are committed to increasing the diversity of its faculty and students and sustaining a work and learning environment that is inclusive. Women, minorities, and people with disabilities are encouraged to apply.

Georgia is well known for its quality of life in regard to both outdoor and urban activities ([exploregeorgia.org](http://exploregeorgia.org)). UGA is a land and sea grant institution located in Athens, 65 miles northeast of Atlanta, the state capital ([www.visitathensga.com](http://www.visitathensga.com); [www.uga.edu](http://www.uga.edu)). UGA is currently ranked among the top 15 public universities in U.S. News & World Report, and typically ranks in the top 25 on national rankings of public research universities (<http://www.uga.edu/profile/pride/rankings/>). Athens, Georgia is frequently ranked as one of the best places to live in the US: <https://athensclarkecounty.com/82/Accolades>.
